

# IT Security for Non-IT Managers

**Course Duration:** 1 day

## Target Audience

- This training course is designed for managers responsible for IT, HR or Finance to have an overview of the role and importance of IT security in corporations.

## Learning Benefits

- Understand the role of IT security as a business driver for corporations.
- Understand the best practices of IT security in areas such as security standards, fundamentals of information security, and security threat management, and
- Planning and implementing a corporate IT security program.

## Course Content

### Morning

- Introduction to Information Security Concepts
- Overview of Current IT Security Threats
- IT Security Defense Strategies
- Global Security Standards
- Role and Importance of In-house Security Training Program

### Afternoon

- Introduction to Corporate Governance
- Corporate Risk Mitigation Strategies (Incidence Response, Business Continuity & Disaster Recovery)
- Overview of Data Privacy and Cyber Laws & Ethics
- Summary and discussion

## Training Methodology

- Classroom based lectures with case studies
- Each student is encouraged to review their corporate policy first, if possible, and to bring one sample (hard & soft copy) with the appropriate names deleted for class discussion and their own exercises.

## Certification

Certificate of attendance would be given for 80% of class attendance and participation.
